INTRODUCTION

Know a little history ...

BLOCKCHAIN WHAT IS TECHNOLOGY?

Blockchain means "chain blocks" was born as a supporting actor in the revolution of bitcoin as it is technology or coding system information that is behind the virtual currency and supporting the entire structure.

Blockchain is a technology that allows the transfer of digital data with a very sophisticated and completely safe way coding. It would be like the book accounting entries of a company where all inflows and outflows of cash are recorded; in this case we speak of a book of digital events.

In addition, this transfer does not require a centralized intermediary that identifies and certifies the information, but is divided into multiple independent nodes together the record and validate without need for trust between them. Once entered, the information can not be deleted, you can only add new records, and will not be legitimate unless most of them agree to do so.

Along the level of security provided by this system against hacking, we find another huge advantage: although the network fell, with only one of those computers or nodes does not, the information will never be lost or the service, as the case of to talk, continue to operate.

An example illustrating the importance of the network is distributed social networks. With this system, blockchain centralization imposed eliminate applications such as Facebook or Twitter when identifying or validating the origin of our messages and the integrity of data would be guaranteed by the network nodes. [1]

WHAT ARE CRYPTOCURRENCIES?

Usman Chohan W. (MBA, University of New South Wales, Canberra) explains that "cryptocurrency is a digital asset that is built to function as a medium of exchange." These exchanges are made through electronic transactions using encryption techniques to "cryptographic technology to ensure transactional flow". That is, as we say Burniske and White in "Cryptoassets" in this case cryptography functions as "a mechanism that allows parties to transmit information securely with each other over insecure channels."

The concept of cryptocurrency, as we know it today, is linked to the creation of Bitcoin, which marks a milestone by being the first to apply a powerful cryptographic system on a platform that, as a public ledger, records and validates chronologically all transactions. This technology is known as technology Cryptoassets or distributed accounting and operation gives very valuable features, such as its decentralized nature and immutability of data recorded there.

The first blockchain was conceived by its creators as an open source system, which led to the emergence of various projects based on this protocol. Many developers created new platforms from the structure proposed in Bitcoin mother and even discovered new uses other than the creation of money, which allows them to generate a plurality of Cryptocurrencies or altcoins and tokens with various functionalities. [2]

WHAT ARE THE TOKEN?

It is "a unit of value that an organization created to govern its business model and empower its users to interact with their products, while facilitating the distribution and sharing of benefits among all shareholders." William defines Mougayar, author of "The bussines blockchain ", the new term of the digital economy. [3]

A "token" (in Spanish tab), as stated earlier, is a unit of value. Commonly it is issued by or related endeavors FINTECH using a blockchain, to which may represent an asset or have particular utility. It resembles with Cryptocurrencies that its value is accepted by a community and there is a blockchain, but has more uses than just a means of payment, because it can represent any fungible and marketable asset.

The tokens are created on an existing protocol cryptocurrency in a given blockchain. In this sense, the emergence of intelligent technology contracts, created by developers ethereum, has meant that today many projects have chosen this network to establish their tokens.

Most of the tokens are distributed through an Initial Offer Currency (ICO, for its acronym in English). It is a form of collective financing (crowdfunding), where enterprises or Cryptocurrencies capture fiat money to develop your plan from interested investors, who in turn receive tokens that have a utility or value within the project.

Bitcoin Wiki distinguishes two types of tokens: safety and utility, which is the most commonly used classification:

* **TOKEN OF UTILITY**

Utility tokens allow their owners to access various services offered by a platform based on a chain of blocks. They are used to boost the microeconomics of a blockchain ecosystem, thereby facilitating project financing. An example would be the token BAT (Basic Attention Token) which is used by the Brave platform and is based on the blockchain of ethereum ERC20 under the standard protocol.

* **SECURITY TOKEN**

Bitcoin Wiki, security tokens "are a type of tokens that give the owner the right to claim their investment interests. May be the right to participate in a legal entity to provide capital, make a profit, be creditor or lender, etc ". Other classifications include reward tokens and tokens backed securities. [4]

WHAT ARE THE WAVES?

It is a network block allows customers to generate their own forms of tokens. Based on information from the wave website, users can customize tokens in just over a minute. However, one should take time and develop a good plan for your tab. [5]

Scalability blocks network has become one of the key issues for the development of blockchain platforms and their forecasts for mass adoption. In this respect, the network of

Waves has been working on a technology solution that will enhance the speed of transaction processing, making it the fastest blockchain in the world.

Roger Aitken, invited Forbes published an article explaining in depth the characteristics of this technology promises to be the "next level of evolution" of the Waves platform and began to be tested by the community this week. The solution is called Waves-NG and is a next generation tool that has a consensus algorithm based on the proposal of Bitcoin-NG, project by Emin Gün Sirer academic and Ittay Eyal.

This new technology aims to put the blockchain compete with traditional Waves processors on the market, consolidating its faster transactions and their ability to process high load distribution such as tokens or bonds-release. Catapulting movement seeking large-scale adoption in the near future.

Aitken points out that the main problem with the blockchain speed currently is due to its high level of de-centralization, a reality that makes it very difficult to synchronize all scattered over a short period of time nodes. This slow response can produce bifurcations, so-NG Waves seeks to "minimize latency and maximize performance." [6]

HEATH

WHAT IS IT?

It is a token created to be acquired easily, quickly and entertaining way. It is an innovative project created with the intention of being one of the largest sources of information and multiple domains. In addition to benefiting millions of people with our applications.

ABOUT US?

We are professionals Tics with a common vision, bringing the benefits of technology and Cryptocurrencies Blockchain people or not they are related to the development of new technologies and the opportunities they represent.

FOUNDERS

The founder of this initiative Heath team is composed of:

✦ **Mario Hidalgo**

CEO " Chief Executive Officer " (Executive Director)

Professional of the Tics. Support Engineer Communications and Network Security.
At Chile.

✦ **Manuel Díaz**

COO " Chief Operating Officer " (Head)

Professional of the Tics. Project Manager of Communication and Infrastructure
Technologies at Chile.

Erick Romero

CMO "Chief Marketing Officer " (Director of Marketing)

Computer Engineering student at the Maritime University of the Caribbean in
Venezuela, Web Developer, Whitepaper and Roadmap.

Coming new ICT experts to contribute to this major project will be added.

Heath has the initiative that everyone can access the world of Cryptocurrencies and Technology Blockchain so we can give a chance to those who need extra income, raise money or those who can't qualify for a bank for your situation, for that matter it is so easy to acquire this token.

DEVELOPERS

Heath when a project to reach more people, has created a community of developers from around the world.

With this model you can create multiple teams and thus move fast and fluid, in each of our projects, besides giving developers an opportunity to increase their knowledge and show their skills.

Having different views of people from different countries who contribute their knowledge in order to add information that will grow positively the project.

Among which are:

✦ **Juan Diego Porra**

Computer engineering student Simon Bolivar University in Caracas, Venezuela. Says he's " Blockchain Interested in technology and in the development of mobile applications on Android, iOS "

✦ **Sebastian Caro**

Technical software development and web developer full stack, fronted, backend databases, also developed iOS and Android apps. Colombia. He says it's " Fascinated by technology Blockchain so I'm constantly learning and looking for new challenges "

Carmelo Campos

PHP specialist. From Venezuela currently residing in Peru

WHAT TO DO WITH HEATH?

HOW TO GET HEATH?

Token can be Reach at

www.heathfind.cl

- ✧ For every post you post will compensate you with Heath.
- ✧ The payment of this Token will be made directly to your account Heath Find, then you decide if you want to apply for credit in your wallet to exchange them for another Cryptoactive and fiat Euros or Dollars.
- ✧ Another way to get Heath is through our App Suma Heath, this can be downloaded from the <https://apps.heath.cl/wp/suma-heath-2>
- ✧ You can also buy on the shelf <https://wavesplatform.com>

If you do not know how to create your address Heath, here we tell you how:

1. Let's <https://wavesplatform.com/> and we "click" in Online Client
2. Now "click" Create a new account.
3. Avatar and we choose a "click" Continue.
4. Create a User ID and Password.
5. We "click" Back up now and then I understand
6. Copy seeds (Seed)

-Are 15 words we can't lose because without these we can't recover our own.

You must be very clear that there is no way to recover these 15 words or seeds (Seed)

Now "click" on I've written it down

7. Now we put the words (Seed) in order and press Confirm.
8. We "check" in the three pictures and then Confirm and begin.
9. And since we are within the platform.
10. For our address Heath, going where our Avatar.
11. To change our Heath by other Token or Cryptocurrencies, click in the chart.

Then we Heath wrote in the search.

RoapMap

HEATH INVESTORS EXCHANGES

WAVES CONTRACT SALES

Heath: emerged as an idea altogether.

Waves: platform which created the token.

Investors: people who used their confidence in investing money in the project.

Contract: agreement between the two parties to implement the project.

Exchanges: the token can be exchanged for others as well as by Cryptocurrencies, dollars and euros.

Sales: You can perform various transactions with this Token.

STAGES:

November 2018
First stage
Launch of
www.heath.cl and
social networks

December 2018:
Second stage:
Launching of
www.heathfind.cl

June 2019
Third stage
An application will be
created to encourage
healthy living

December 2019
Fourth stage
A GPS application
will be created

- ✦ **First stage:** www.heath.cl release and social networks; where you will find all the information regarding the project.
- ✦ **Second stage:** throwing of www.heathfind.cl; forum will be one of the largest sources of information and multiple domains.
- ✦ **Third stage:** an application to encourage healthy living will be created; the user will be rewarded for taking a walk, run or perform a series of exercise routines at different levels. You also find recipes and tips for your health.
- ✦ **Fourth stage:** a GPS application will be created; In addition to guiding the user to your destination, it will have rewards for different collaborations between them;
 1. Report automotive traffic density.
 1. Accidents.
 2. Existence of some kind of danger on the road.
 3. Upload photos of mall, parks, museums, subway stations, parking lots and more.

The acquisition of this token is displayed will be very easy and entertaining.

Along with the aforementioned projects you will be creating an NGO for people who need assistance in different fields.

SERVICES

We have until now with different services which are:

- ✦ **Find Heath:** A chat forum where you can find many topics such as:
 1. Current interest
 2. Entrepreneurship.
 3. Sport.
 4. Video game.
 5. Recipes.
 6. Religion.
 7. Technology and many more,

It also has a section where you can expose your projects and in this way to get donations Heath to carry them out, even if you want to create a theme and can't find the category there is a section "Tips" where we will be able to propose new categories.

✧ **Hosting:** Web hosting is the service that provides Internet users a system to store information, images, videos, or any content accessible via the web.

1. All of our shared hosting packages come with "cPanel", the leading web control panel that lets you manage your account easily through your favorite web browser. No need technical expertise to manage your account.
2. All our nodes are equipped with the latest and fastest processors enterprise-class Intel / AMD with more than 256 GB of RAM, allowing access to a myriad of resources to all guests staying. CISCO protection and firewall applications.
3. Our data centers (SAS 70 Type II certification), with N + 2 redundancy leader in the industry, are equipped with multiple internet lines, emergency diesel generators, tape libraries backups, 24/7 monitoring to ensure speed, security and redundancy.

✧ **Images:** You can win Heath to share your pictures with everyone.

How to do it?

Drag and drop where you want and start charging your pictures now. 10MB limit.

Direct links to images, thumbnails and HTML BBCode.

Videos: You can win Token Heath sharing your videos with everyone in the same way that occurs in the above images.

However, among the purposes it is; go implementing new functions for such services as well as be creating and increasing that list to further encourage obtaining token through Heath.

OBJECTIVES

- ✦ Being an innovative project massive impact on society.
- ✦ Reach more people which would benefit from it.
- ✦ Direct individuals to immerse themselves in the world of Cryptocurrencies and blockchain Technology.
- ✦ Heath in obtaining spare time.
- ✦ Alternative for extra income.
- ✦ Way to earn income from an easy, creative and entertaining way.
- ✦ Go towards improving our services to benefits in conjunction with the client.
